TAYYIP ARDA KOZAN

I am student at Computer Engineering Department of Hasan Kalyoncu University. I have many experiences programming video games in Unity Engine. I can do whatever it takes about this job. I don't leave a job halfway because I am a bit perfectionist. I worked a few team projects related to programming video games and I did all projects on Unity Engine. So, I am experienced at that but I want to know other engines, other languages to improve myself. My expectation from this job is to have the knowledge to make my own game. Currently, I am working make a tycoon game by independently with my partners who we have teamed before.
